SUMMARY

Full-Stack Engineer with 6+ years of experience designing and building scalable, cloud-native applications using Next.js, NestJS, and distributed microservices architecture. Experienced in system design, event-driven systems, and high-performance backend services deployed on AWS and GCP. Recently focused on AI-integrated solutions, including LLM-powered features, RAG pipelines, and intelligent automation workflows. Strong track record of delivering production-grade systems with emphasis on scalability, reliability, and performance optimization.

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Oct 2021 - Present

InvoZone

- Lead development of the social media analytics platform, powering real-time insights across Instagram, Twitter/X, Facebook, TikTok, YouTube, blogs, and forums.
- Integrated OpenAI APIs with streaming responses, reducing manual report generation time by 60% and improving client insight turnaround.
- Designed LLM-based content summarization and automated reporting features.
- Developed micro-services and RESTful APIs in NestJS frameworks to aggregate, filter, and serve live metadata.
- Built the front-end using Next.js, delivering high-performance, SEO-friendly dashboards with interactive charts (reach, engagement, sentiment, share-of-voice), post streams, and media walls.
- Actively participating in client meetings to understand requirements and provide technical insights, strengthening client relationships.
- Coordinated inter-service communication via RabbitMQ/Pub-Sub/Apache Pulsar

Software Engineer

Sept 2020 - Oct 2021

Petsaal Technologies

- Successfully designed and implemented key features that enhanced user experience and increased customer satisfaction.
- Optimized backend queries and caching strategy, reducing API response time by 45% and improving dashboard load speed by 35%.
- Working closely with cross-functional teams to deliver solutions that align with business goals and client needs.
- Identifying and resolving critical bugs, reducing downtime and improving overall system reliability.

Software Developer

Sep 2019 - Sept 2020

Bloomrix

- Successfully designing and launching a user-friendly novel website that attracts a significant user base.
- Developing efficient web scraping scripts to gather and update novel data automatically, ensuring up-to-date content.
- Creating a robust database structure to store and manage scraped data effectively, allowing for easy retrieval and updates.
- Designed and implemented RESTful APIs with NodeJS REST Framework for frontend-backend communication
- Integrated OAuth authentication and role-based access control (RBAC) to improve security.
- Improved UI/UX by implementing Material-UI and Tailwind CSS, increasing user engagement.
- Developed frontend components with React.js, Redux, and Material-UI, improving page load times by 30%.

TECHNICAL SKILLS

Language: JavaScript, TypeScript, PHP, Python
Backend: Node.js, Nest.js, Express.js
AI & LLM: OpenAI API, RAG Implementation, LLM Integration, AI Integration, AI Chatbots
Frontend: Next.js, React.js, Redux, Tailwind CSS
Databases: PostgreSQL, MySQL, MongoDB, Supabase
Cloud & DevOps: GCP, AWS, Docker, CI/CD, Git, RabbitMQ, Pub/Sub, Apache Pulsar
Cloud & DevOps: GCP, AWS, Docker, CI/CD, Git, RabbitMQ, Pub/Sub, Apache Pulsar

PROJECTS

Ask

<https://hulul.askco.sa>

Developed an event management system for the Saudi government, enabling seamless event planning and registration.

- Built the frontend with Next.js for a fast, responsive interface and the backend with NestJS microservices containerized using Docker. Deployed the platform on Google Cloud Platform (GCP) for scalability, security, and high availability.

Muck Rack

<https://muckrack.com/>

Muck Rack is a social media insights platform that empowers brands, agencies, and institutions to monitor their online presence and enhance social media management.

- By integrating React.js, Node.js, Express.js, CakePHP, and NestJS with MySQL, Keyhole provides comprehensive analytics that go beyond basic metrics, helping users make data-driven decisions.

Nano Apply

<https://nanoapply.com>

NanoApply is an AI-powered tool designed to accelerate the job application process. It features a web dashboard and browser extension that automatically fills out repetitive application forms and generates tailored answers using an uploaded resume. The platform also allows users to manage multiple role-specific profiles and track their application history in one place.

Cybrology

<https://cybrology.com>

Led a team to build an AI-driven cybersecurity risk-assessment and training platform with a RAG pipeline at its core, delivering instant vulnerability checks and a personalized risk index grounded in real cybersecurity knowledge bases.

- Implemented AI across the platform powering adaptive skill assessments in the LMS, personalized learning paths, and realistic phishing simulations alongside live labs, gamified leaderboards, team analytics, and compliance readiness for SOC 2, HIPAA, GDPR, and NIST. Built with Next.js.

EDUCATION

Bachelor in Computer Science (2015 - 2019)

Lahore, Pakistan

University Of Lahore

STRENGTHS

Frontend & Backend Development

Proficient in a wide range of programming languages and technologies, with a strong focus on both front-end and back-end development.

Team Leadership & Agile Methodologies

Skilled in guiding development teams and projects, applying Agile methodologies to foster smooth and productive collaboration
